JOURNAL OF COMPUTATIONAL AND APPLIED MATHEMATICS

Volumes 12&13, May 1985

CONTENTS

Preface xi

List of invited speakers xiii

List of talks xiv

INVITED PAPERS

O. AXELSSON
Incomplete block matrix factorization preconditioning methods. The ultimate answer? 3

C. BREZINSKI
Convergence acceleration methods: The past decade 19

J. CULLUM and R.A. WILLOUGHBY
A survey of Lanczos procedures for very large real 'symmetric' eigenvalue problems 37

W. GAUTSCHI
Orthogonal polynomials—Constructive theory and applications 61

C.W. GEAR, G.K. GUPTA and B. LEIMKUHLER
Automatic integration of Euler–Lagrange equations with constraints 77

R. JELTSCH
Stability and accuracy of difference schemes for hyperbolic problems 91

J.N. LYNESS
Integrating some infinite oscillating tails 109

M. MORI
Quadrature formulas obtained by variable transformation and the DE-rule 119

I.H. SLOAN
Lattice methods for multiple integration 131

P.J. VAN DER HOUWEN and B.P. SOMMEIJER
High order difference schemes with reduced dispersion for hyperbolic differential equations 145

R.H. WANG
The dimension and basis of spaces of multivariate splines 163

T. YAMAMOTO
A unified derivation of several error bounds for Newton's process 179

CONTRIBUTED PAPERS

M. BOZZINI, F. DE TISI AND L. LENARDUZZI
Reduced set of leads for electrocardiography, maintaining significant information 195

R. CALUWAERTS
An automatic procedure for the calculation of bifurcation points of integral equations 207

M.N. CHAWLA
Superstable two-step methods for the numerical integration of general second order initial value problems 217

A.A.M. CUYT
A review of multivariate Padé approximation theory 221

G.R. DARGAHI-NOUBARY
On evaluation of the effects of earthquake and wind on reliability of structure 233

G. DE MEY
The auxiliary boundary element method for time dependent problems 239

E. DICK
A multigrid method for the Cauchy–Riemann equations based on fluxdifference splitting and its extension to the steady Euler equations 247

B. DÖRING
On the zeros of Flett's function 265

I.H. EL-SIRAFY
Two-dimensional flow of a nonstationary micropolar fluid in the half-plane for which the shear stresses are given on the boundary 271

C.C. GROSJEAN and M.J. GOOVAERTS
On the series expansion of certain types of integral transforms—Part I 277

C.C. GROSJEAN
Theory of recursive generation of systems of orthogonal polynomials: an illustrative example 299

A. HADJIDIMOS
Optimum iterative methods for the solution of singular linear systems arising from the discretization of elliptic P.D.E.'s 319

M. HATZOPOULOS and N.M. MISSIRLIS
Advantages for solving linear systems in an asynchronous environment 331

P.C. HANSEN and S. CHRISTIANSEN
An SVD analysis of linear algebraic equations derived from first kind integral equations 341

D.M. HOUGH
Jacobi polynomial solutions of first kind integral equations for numerical conformal mapping 359

M. IGARASHI
Practical stopping rule for finding roots of nonlinear equations 371

M. IKEUCHI and M. SAKAKIHARA
Boundary elements in steady convective diffusion problems 381

S. JOE
Collocation methods using piecewise polynomials for second kind integral equations 391

W.B. JONES and W.J. THRON
On the computation of incomplete gamma functions in the complex domain 401

J.P. LAMBERT
Quasi-Monte Carlo, flow discrepancy sequences, and ergodic transformations 419

D.P. LAURIE
Practical error estimation in numerical integration 425

M.R. FARMER and G. LOIZOU
An algorithm for the computation of zeros of a special class of entire functions 433

I.M. LONGMAN
The summation of power series and Fourier series 447

C. MAAS
Computing and interpreting the adjacency spectrum of traffic networks 459

A. MAGNUS and R. CHAUVAUX
On the discretisation of the double layer integral operator for surfaces of revolution 467

O. NEVANLINNA
Matrix valued versions of a result of von Neumann with an application to time discretization 475

H. NIESSNER and M. RIBAUT
Condition of boundary integral equations arising from flow computations 491

C. POTIER and C. VERCKEN
Surface smoothing with finite elements 505

E.L. ORTIZ and K.-S. PUN
Numerical solution of nonlinear partial differential equations with the Tau method 511

D. ROOSE
An algorithm for the computation of Hopf bifurcation points in comparison with other methods 517

W.G. RUDD, C.J. WANG and W. PENG
Efficient integration over polytopes 531

P. SABLONNIERE
Composite finite elements of class C^k 541

W. SMYTH
Algorithms for the reduction of matrix bandwith and profile 551

M.N. SPIJKER
Feasibility and contractivity in implicit Runge–Kutta methods 563

G. STEINER
An algorithm for minimizing setups in precedence constrained scheduling 579

R.L. STERNBERG, R.B. GRAFTON and D.R. CHILDS
On a numerical minimization problem for a new class of nonlinear partial differential equations arising in nonspherical geometrical optics and beamforming lenticalar antennas 591

N.M. TEMME
A convolution integral equation solved by Laplace transformations 609

W. VAN ASSCHE
Some results on the asymptotic distribution of the zeros of orthogonal polynomials 615

F.P. WHEELER
Aspects of the simulation of wave propagation through a clear turbulent medium 625

S. YAMADA, I.-A. OHSAKI, M. IKEUCHI and H. NIKI
Non-adaptive and adaptive SAOR-CG algorithms 635

Z. ZLATEV
Mathematical model for studying the sulphur pollution over Europe 651

Author Index 667
